

## Ducks Foot Bale Handler

The **Ducks Foot Bale Handler** concept was originally designed by Cashels over 30 years ago for handling round, wrapped silage bales. This time-proven design, with its uniquely shaped, galvanised "Ducks Foot" paddles can handle sagged or misshapen silage bales without causing damage to the bale film.

The Cashels **Ducks Foot Bale Handler** is suitable for transporting both round and square bales of straw, haylage and silage. Its "Ducks Foot" paddles rotate on CAT 2 stone fork tines and can easily be removed, allowing the unit to be used for spiking round bales during the winter and also for transporting square bales of straw and haylage.

Shown with optional loader linkage.
